Re: Docket #07-16

Dear Secretary Dortch,

The growth of the economy is helped by internet sales, and having more Americans with fast, broadband access will increase the economy even more. I'd like to see Americans have a more cost effective option to receive broadband, and that's why I write to support the M2Z Networks proposal to provide free broadband.

Making free, fast broadband access available to everyone will allow millions of Americans to go online for work, play and shopping. In one quarter, as much as \$26 billion is made in retail sales through the internet. Broadband would allow people to move around the internet easily and make purchases they couldn't otherwise make.

More internet access at high speed is what is needed, and I hope you'll support this proposal. For those who cannot currently receive or afford broadband, this will open up new opportunities, and potentially have a strong impact on the economy.

Sincerely,

Dear Secretary Dortch,

I'm writing to you today to ask for your support of Docket #07-16, the M2Z Networks proposal to provide free, fast and family-friendly broadband internet to all Americans. I support their efforts to receive the necessary spectrum for this plan. Bringing high-speed internet services to more Americans will make our country more competitive as a whole.

While the U.S. now ranks 21<sup>st</sup> globally, more people will be able to use the internet with the help of M2Z Networks. As small business owner, I see the daily need for fast and reliable internet service. I also know the burden the high cost of internet places on small business owners.

I ask you to support the proposal to bring all Americans the opportunity to have fast, free, wireless broadband internet access. This will help our country catch up to other countries where it is already widely available and will help small businesses start-up and grow into successful businesses. Thank you for your time and consideration.

Re: Docket #07-16

Dear Secretary Dortch,

The importance of the internet cannot be understated; it is used daily by most Americans in work or play. Using the internet at broadband speed maximizes the many benefits of going online. However, over one hundred million Americans do not currently use broadband. This number puts the U.S. 21<sup>st</sup> in the world for broadband access.

Many small businesses, such as mine, would greatly benefit from an affordable option for internet access. The M2Z proposal before the FCC can make this happen if it is approved. I would like to see more Americans have access to broadband and by offering it free to everyone, many who cannot afford broadband will be able to join the online community. Small businesses will be able to utilize the internet to boost business which will certainly help our economy grow.

For so many, location and cost prevent them from receiving broadband internet. This can, and should, be changed. The country will benefit from having more access and better communication abilities. Please support the M2Z Networks proposal.

Re: Docket #07-16 to provide fast, free, family-friendly wireless broadband internet access

Dear Secretary Dortch,

Using the internet is a large part of the day for many Americans. Many rely on the internet for communication through email and some simply for play. But for small businesses, and those who work from home, the internet can be the main source of information, news or sales. When a small business is not connected to the Internet, the business is limited in its effectiveness and efficiency.

As a small business owner, I know that a fast and reliable internet connection allows me to be as efficient and as organized as possible, whether keeping track of client files and payment information, or receiving news and updates. I believe the proposal put forth by M2Z Networks to make wireless broadband internet available at no cost will help small businesses everywhere. By saving on the cost of broadband, or even receiving access for the first time, a small business can better use the tools of the internet such as marketing and online sales opportunities.

I know that saving on broadband access will increase the bottom line for small businesses. I urge you to taking advantage of the M2Z Networks proposal and continue supporting and building America's small businesses.

Sincerely,

David Henry

Re: Docket #07-16

Dear Secretary Dortch,

More and more Americans are working from home, as many as 45 million. For most, this requires a high level of connectivity, access to information, e-mail and on-line resources. Broadband internet makes all of that possible.

For many in this country, broadband internet service is unavailable or the cost is too high to make it a viable service for their home. If more businesses and homes had broadband internet, more Americans could enjoy the benefits of working from home. I support the proposal by M2Z Networks to provide fast, free, wireless broadband internet access to everyone. Making access to broadband widely available opens the door for many more Americans.

Great Inflates Party Rentals relies heavily on internet traffic and advertising. Americans today are turning to the internet first when they need to find a service. Having a website has helped my business generate more customers and I think all small businesses should be able to get connected and have their services shown online.

Please support this proposal and allow more broadband service to be available in this country. Having more homes and businesses with fast internet service connects the country and makes it more productive and competitive.

Re: Docket #07-16 to provide fast, free, family-friendly wireless broadband internet access

Dear Secretary Dortch,

99 percent of all business in the United States are small businesses. In today's economy, many of these small businesses benefit from online sales and internet marketing. Sadly, only 35 percent of small businesses have websites. If broadband internet was more widely available, or affordable, more businesses would be able to take advantage of the benefits of having their business online.

As a small businessman, I am in favor of the plan offered by M2Z Networks to provide fast, free, family-friendly wireless broadband internet access. With this fast, reliable and affordable broadband access, businesses will be able to better communicate and connect with the resources they need to run more efficiently. Also, with the optional services being offered, businesses can use the web for sales and marketing.

I urge you to approve the proposal by M2Z Networks and help provide small businesses with the opportunity to participate in the online market and to continue competing in the global economy.

Sincerely,

Douglas Stewart

Re: Docket #07-16

Dear Secretary Dortch,

In this country, over \$25 billion in retail sales are made over the Internet in just one quarter. That important economic impact could be improved if more people had access to broadband Internet access. With broadband, using the Internet and taking advantage of shopping sites is made easier. I urge you to provide more broadband access by supporting the M2M Networks plan to provide free, fast and family-friendly broadband to everyone.

If given the opportunity, this plan will provide access to millions who currently go without the option of receiving broadband. Those millions of people are likely to join the on-line purchasing community, adding billions more to the economy. As a whole, this country needs more people on-line, taking advantage of new purchasing opportunities. The boost would lead to improved sales and help small businesses across the country.

Greater access to broadband Internet will also help small businesses, like Valley Seamless Gutter, in another way. Valley Seamless Gutter is located in a rural area and broadband Internet access will allow such businesses to tap into a section of customers that is growing every day, the Internet customer. Giving more people access to the Internet allows consumers to not only become better consumers, but businesses to become better businesses.

Please work for this proposal's passing and work to help millions who would benefit from free, fast broadband access. I thank you for your time and considering this issue.

Sincerely,

Leonard Bush and Ruth McKinnley  
Founders, Valley Seamless Gutter

Making free, fast broadband access available to everyone will allow millions of Americans to go on-line for work, play and shopping. In one quarter, as much as \$26 billion is made in retail sales through the internet. Broadband would allow people to move around the internet easily and make purchases they couldn't otherwise make.

More internet access at high speed is what is needed, and I hope you'll support this proposal. For those who cannot currently receive or afford broadband, this will open up new opportunities, and potentially have a strong impact on the economy.

Re: Docket #07-16 to provide fast, free, family-friendly wireless broadband internet access

Dear Secretary Dortch,

Using the internet is a large part of the day for many Americans. Many rely on the internet for communication through email and some simply for play. But for small businesses, and those who work from home, the internet can be the main source of information, news or sales. When a small business is not connected to the Internet, the business is limited in its effectiveness and efficiency.

As a small business owner, I know that a fast and reliable internet connection allows me to be as efficient and as organized as possible, whether keeping track of client files and payment information, or receiving news and updates. I believe the proposal put forth by M2Z Networks to make wireless broadband internet available at no cost will help small businesses everywhere. By saving on the cost of broadband, or even receiving access for the first time, a small business can better use the tools of the internet such as marketing and online sales opportunities.

I know that saving on broadband access will increase the bottom line for small businesses. I urge you to taking advantage of the M2Z Networks proposal and continue supporting and building America's small businesses.

Sincerely,

David Henry

Re: Docket #07-16

Dear Secretary Dortch,

More and more Americans are working from home, as many as 45 million. For most, this requires a high level of connectivity, access to information, e-mail and on-line resources. Broadband internet makes all of that possible.

For many in this country, broadband internet service is unavailable or the cost is too high to make it a viable service for their home. If more businesses and homes had broadband internet, more Americans could enjoy the benefits of working from home. I support the proposal by M2Z Networks to provide fast, free, wireless broadband internet access to everyone. Making access to broadband widely available opens the door for many more Americans.

Great Inflates Party Rentals relies heavily on internet traffic and advertising. Americans today are turning to the internet first when they need to find a service. Having a website has helped my business generate more customers and I think all small businesses should be able to get connected and have their services shown online.

Please support this proposal and allow more broadband service to be available in this country. Having more homes and businesses with fast internet service connects the country and makes it more productive and competitive.

Sincerely,

Bob Adams

Re: Docket #07-16 to provide fast, free, family-friendly wireless broadband internet access

Dear Secretary Dortch,

99 percent of all business in the United States are small businesses. In today's economy, many of these small businesses benefit from online sales and internet marketing. Sadly, only 35 percent of small businesses have websites. If broadband internet was more widely available, or affordable, more businesses would be able to take advantage of the benefits of having their business online.

As a small businessman, I am in favor of the plan offered by M2Z Networks to provide fast, free, family-friendly wireless broadband internet access. With this fast, reliable and affordable broadband access, businesses will be able to better communicate and connect with the resources they need to run more efficiently. Also, with the optional services being offered, businesses can use the web for sales and marketing.

I urge you to approve the proposal by M2Z Networks and help provide small businesses with the opportunity to participate in the online market and to continue competing in the global economy.

Sincerely,

Douglas Stewart

RAJ DORTCH #0716

Dear Secretary Dortch,

In this country, over \$26 billion in retail sales are made over the Internet in just one quarter. That important economic impact could be improved if more people had access to broadband Internet access. With broadband, using the Internet and taking advantage of shopping sites is made easier. I urge you to provide more broadband access by supporting the M2Z Network plan to provide free, fast and family-friendly broadband to everyone.

If given the opportunity, this plan will provide access to millions who currently go without the option of receiving broadband. Those millions of people are likely to join the on-line purchasing community, adding billions more to the economy. As a whole, this country needs more people on-line, taking advantage of new purchasing opportunities. The boost would lead to improved sales and help small businesses across the country.

Greater access to broadband Internet will also help small businesses like Valley Seamless Gutter, in another way. Valley Seamless Gutter is located in a rural area and broadband Internet access will allow such businesses to tap into a section of customers that is growing every day: the home customer. Giving more people access to the Internet allows consumers to not only become better consumers, but businesses to become better businesses.

Please work for this proposal's passing and work to help millions who would benefit from free, fast broadband access. I thank you for your time and considering this issue.

Sincerely,

Leonard Bud and Ruth McKenna  
Founders, Valley Seamless Gutter

Re: Docket #07-16

Dear Secretary Dortch,

The importance of the internet cannot be understated; it is used daily by most Americans in work or play. Using the internet at broadband speed maximizes the many benefits of going online. However, over one hundred million Americans do not currently use broadband. This number puts the U.S. 21<sup>st</sup> in the world for broadband access.

Many small businesses, such as mine, would greatly benefit from an affordable option for internet access. The M2Z proposal before the FCC can make this happen if it is approved. I would like to see more Americans have access to broadband, and by offering it free to everyone, many who cannot afford broadband will be able to join the online community. Small businesses will be able to utilize the internet to boost business which will certainly help our economy grow.

For so many, location and cost prevent them from receiving broadband internet. This can, and should, be changed. The country will benefit from having more access and better communication abilities. Please support the M2Z Networks proposal.
